

IMAGING & RADIOLOGY

At Nor-Lea Hospital District, our radiology team provides a full range of leading-edge diagnostic imaging while ensuring the highest level of patient care and experience. Our radiologic technologists are educated in anatomy, examination techniques, equipment protocols, radiation safety and protection. Our team works closely with boardcertified radiologists and physicians to provide highquality images essential to diagnoses and treatment. We are committed to providing compassionate, patientcentered imaging services to all our patients.

SERVICES WE PROVIDE

- Bone Density DEXA
 - a. DEXA scans measure bone density, thickness and strength, by passing a high and low energy x-ray beam through the body.
- Computed Tomography CT
 - a. CT scans use ionizing radiation to capture images of selected areas of the body. The scans combine a series of x-ray images into a three dimensional picture.
- Fluoroscopy
 - a. Fluoroscopy is a medical procedure that creates a video of movements inside the body by passing x-rays through the body over a period of time.
- Magnetic Resonance Imaging MRI
 - a. MRI scans use a magnetic field and computer-generated radio waves to create detailed images of the organs and tissues of the body.
- Mammography
 - Mammograms are x-ray images of the breast.
- Radiography (x-ray)
 - a. X-rays scans pass x-ray beams through the body to produce images of selected areas of the body.
- Ultrasound
 - a. Ultrasound imaging uses sound waves to produce images of structure within the body.
